

Logitrans ELFRA/SELFRA turner 1000 kg

Referencia: ELFRA/SELFRA

Description

This turner can tilt drawers and boxes with its adjustable supports helping the operator to reach the contents with no need to stretch, bend or make sudden movements with the back, thus protecting their health and improving their working conditions and productivity.

A box stand can load up to 1000 kg, even operating in an inclined position greater than 90°. The rotator makes it easy to adjust the tilt degree and the rotation speed. To increase safety, the tilt function is disabled when the centre of rotation is higher than 1180 mm or less than 680 mm from the ground.

This range of Logitrans tippers includes a large touch screen that is extremely easy to use thanks to its simple and visual presentation. Thanks to this, various stops, rotation angle, speed and turning can be programmed.

Additional information about the Logitrans ELFRA/SELFRA container turner

- It has optional equipment such as clamps to hold boxes of heights between 635 and 875 mm in an inclined position.
- It is a robust machine with low maintenance costs - no relays or wearing parts.
- The rotator operates with precise acceleration and deceleration, controlled in turning during start and stop.
- The tilt function is automatically deactivated when turning to the neutral position
- It offers the possibility of keeping a record of the operating time, current consumption, number of operations, overload record and battery status.
