

Logitrans EHSS stainless steel manual stacker with articulated legs 1000 kg

Referencia: EHSS

Description

In very aggressive and demanding work environments such as the pharmaceutical or food industry, this stacker is the most effective solution. It is made of AISI 316L acid-resistant steel for the fork chassis, preventing rust from forming if it is scratched.

The forks are closed and their ergonomic, compact design reduces spaces where bacteria can accumulate. It is recommended for tight workplaces as its design combines great manoeuvrability with use of space.

Logitrans' extensive testing programme guarantees the highest quality on the machine as well as compliance with the highest health and safety standards.

Further information on the Logitrans EHSS manual stacker
